

Project and Total Solutions Management

Collaborative approach yields optimum results

RDA Group recognise the need to have an accurate and shared understanding of project milestones and solution goals. We ensure involvement of sponsors and stakeholders in a structured process which is inclusive and participatory.

By taking the time to develop a clear understanding of the goals and objectives surrounding your requirements, we provide superior solutions, which when coupled with our professional project management staff, are more resilient to the effects of change and scalability.

We also appreciate that all solution implementations, regardless of their size, require a strong foundation to ensure deliverables and outcomes are both defined and measurable. RDA Group apply the PMBOK (Project Management Body of Knowledge) methodology when developing Project Delivery Framework.

“RDA Group’s project implementation and delivery is executed on proven project management methodology. The ability to deliver project outcomes both on time and on budget is key to our success.”

“We work with you and your people to allow them to realise your project objectives in the most efficient and positive manner possible. This provides you with a direct benefit to your bottom line.”

Project Management Planning - essential to project success

Without planning, a project implementation is destined for failure. RDA Group understand the importance of planning and the contribution you need to have in the development of your Project Management Plan (PMP).

The involvement of your key stakeholders and business units ensure that the PMP encompasses all facets of the project implementation and ongoing maintenance.

The PMP includes the following components:

- Scope
- Budget
- Deliverables
- Issues
- Vendors/Procurement
- Quality
- Governance
- Schedule
- Personnel
- Risks
- Interdependencies
- Your expectations
- Change Management
- Communications Management

The PMP will provide both you and RDA Group with a clear, documented understanding of the project, the deliverables, projects stages and scheduling, resources and budget required. That way, we are all on the same page and can execute a seamless IT project for your business.

Our solutions are delivered on time, every time and within project scope.
